Linux Kernel Continuous Integration Project: An Example

Coursera.org/learn/open-source-software-development-methods/supplement/K3t3U/linux-kernel-continuous-integration-project-an-example

courserd

The Linux kernel development community employs a very robust Continuous Integration project, <u>kernelci</u>. While it was originally created by <u>Linaro</u>, it is now an independent <u>Linux Foundation project</u>.

Its mission is to help ensure long-term quality control, stability and facilitate maintenance of the Linux kernel. It works with:

- The kernel developer community, giving them a tool to use in their daily workflow as needed.
- Hardware manufacturers to help them stay close to kernel changes and development.
- Helping downstream developers by performing solid upstream testing.
